## Continuous water situation installation method:

①The saddle points hydrant fixed on a pipe

②Perforation drill set

③The continuous water in the drilling pipe

④Installation insert the flow meter

⑤Loosen the screw flow meter

⑥The flow meter is inserted into the pipe

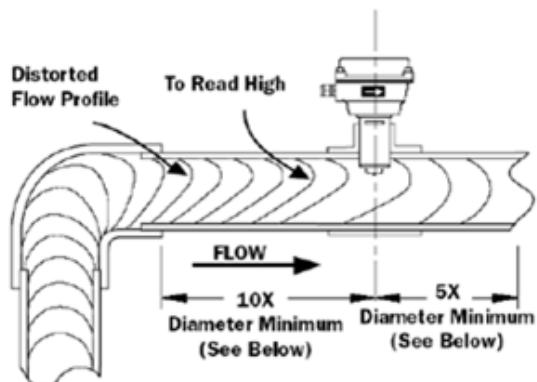

⑦Wiring, and confirm the action

Pictured above described beat installation  
Purely on the installation method for the  
additional guidance adopted under drawings

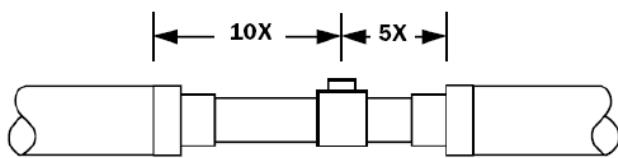

## Installation location:

- Fluid to flow through the tube portion that is not directly cause instability spoiler
- So to test the meter installation location downstream straight pipe section shall retain a considerable multiple of the diameter, as eliminate the phenomenon of the role of spoiler; shown in Fig.

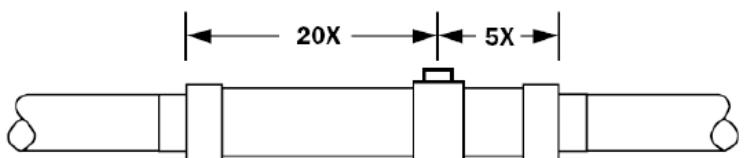

## Multiple of the diameter of the straight pipe section (recommended):

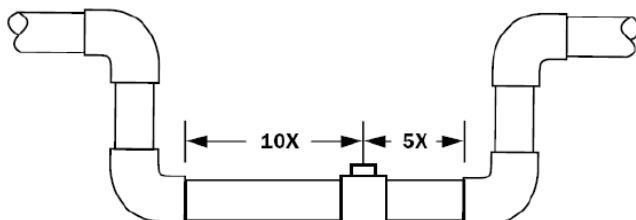

- The narrow diameter

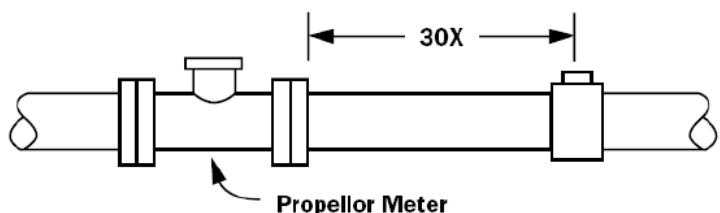

- The expanded diameter

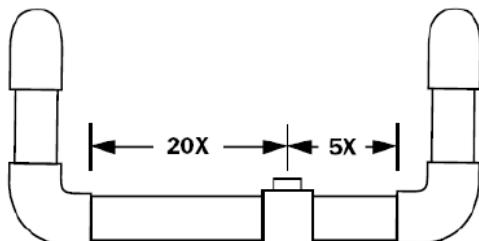

- On the same plane when two elbow

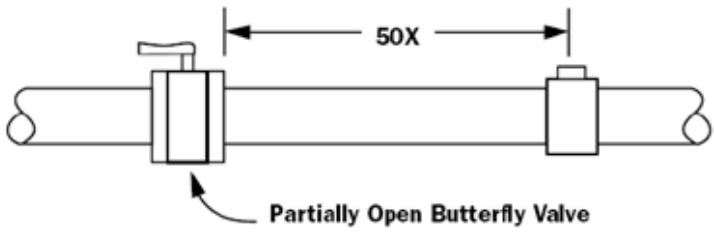

- Spiral flow is generated

- When two elbows in different planes

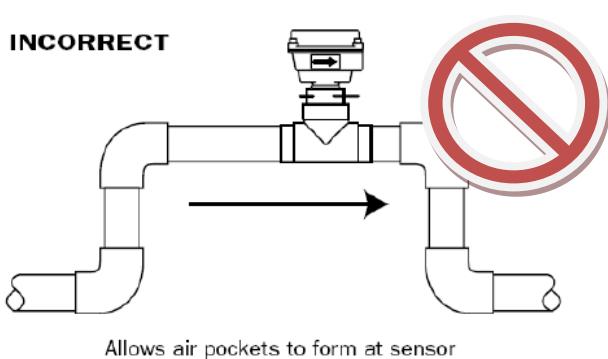

- The vortex / spoiler

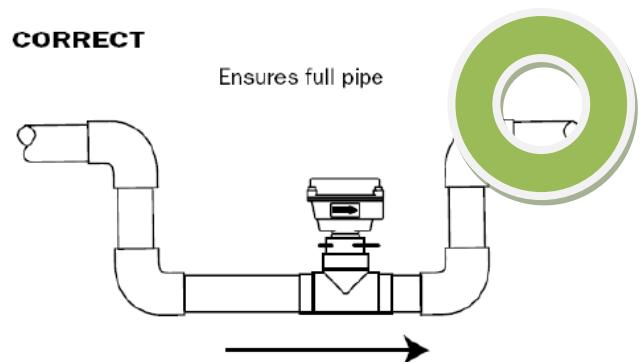

## Full pipe installation(Be sure to follow):

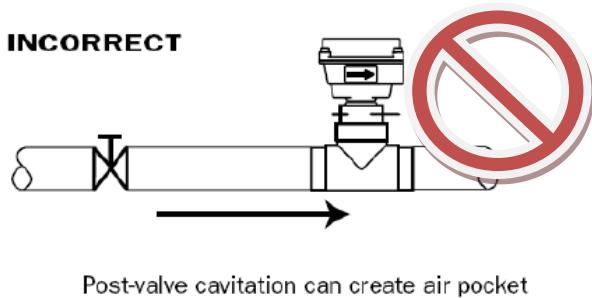

- Incorrect (stack to allow fluid sensor)

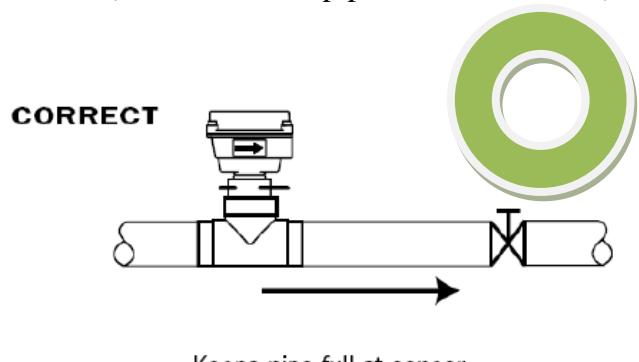

- Correct (to ensure full pipe)

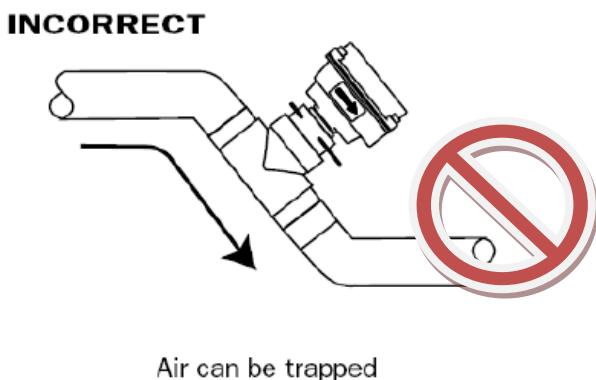

- Incorrect (no front valve of the fluid will cause the fluid Diego heap)

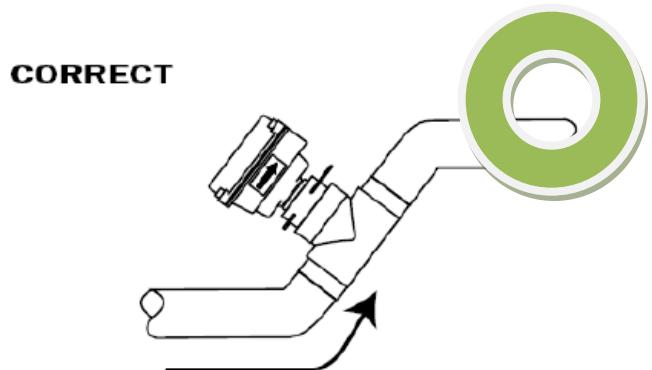

- correct (to maintain full pipe at the flow meter)

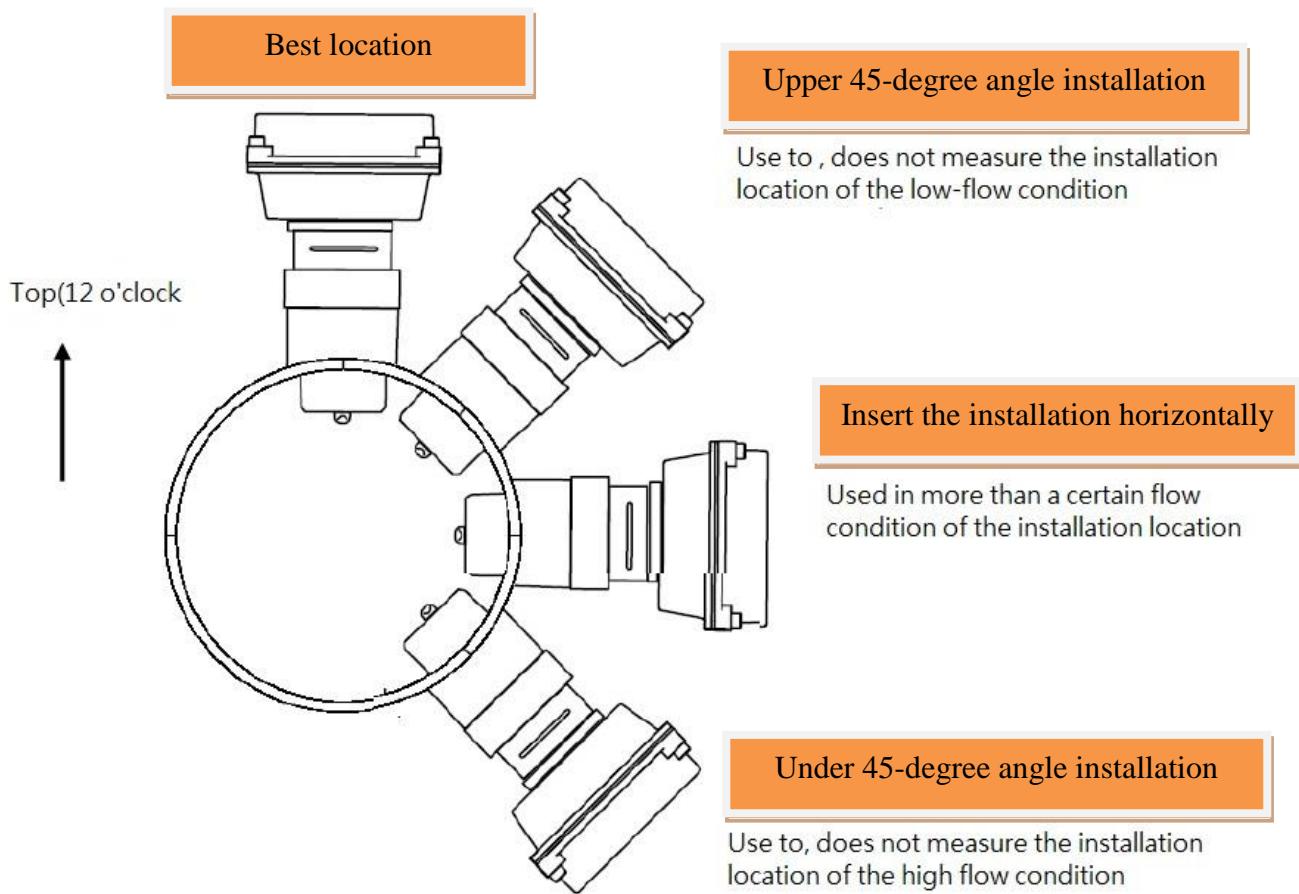

- Incorrect (fluid discharge will be limited)

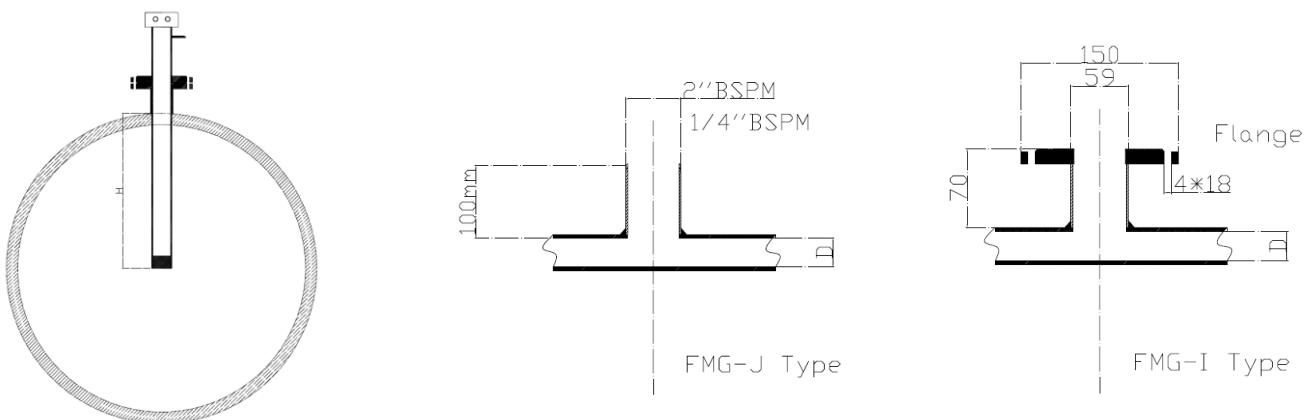

- Correct (fluid smoothly discharged)

## 面板操作顯示設定:

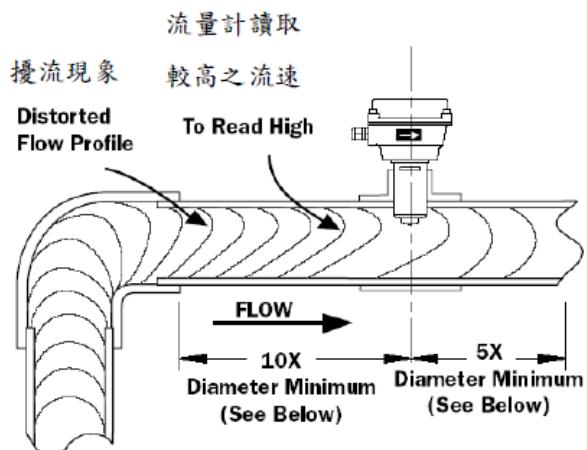

## 不斷水情況下安裝工法:

## 安裝位置說明

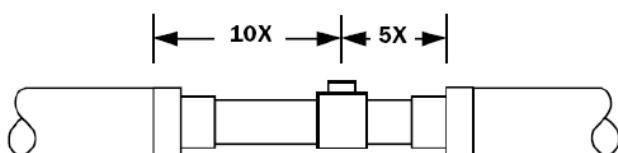

- 流體於流經非直管部位即會產生不穩定擾流

如圖所示;因此於流量計安裝位置上下流測均須保留一定相當管徑倍數之直管部，以作為消去擾流現象之作用

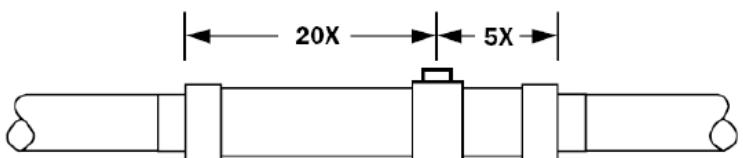

## 管徑倍數之直管部(建議值):

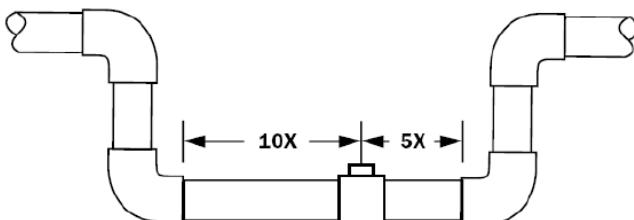

- 縮小管徑時

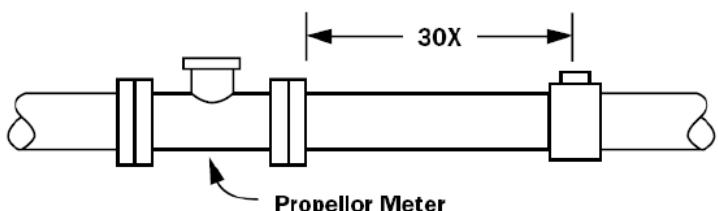

- 擴大管徑時

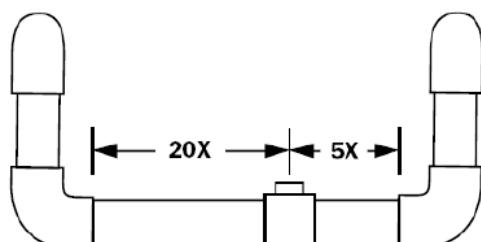

- 於同一平面  
兩個彎頭時

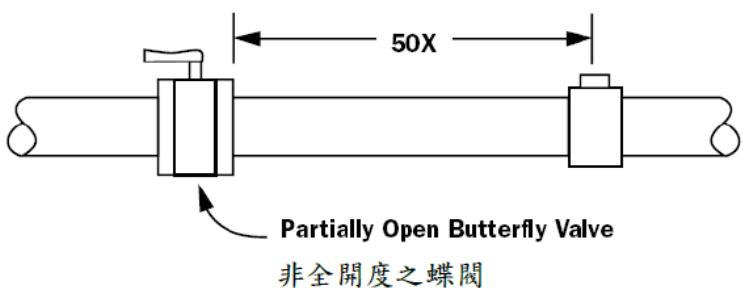

- 產生螺旋流時

- 於不同平面  
兩個彎頭時

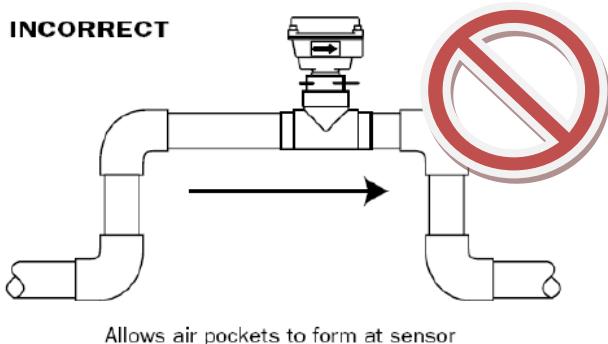

- 產生渦流/擾流時

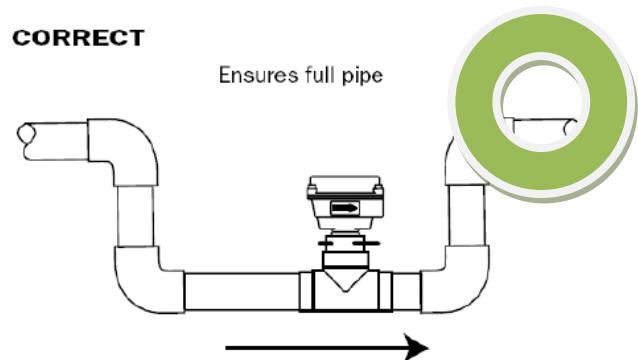

## 滿管安裝方式(請務必遵行):

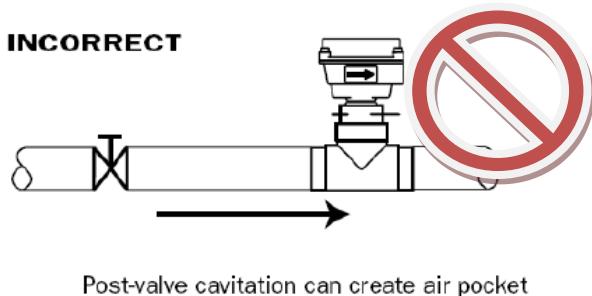

- 不正確(允許流體疊堆於感測器)

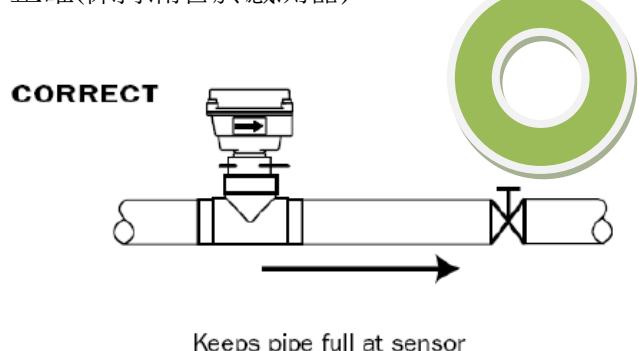

- 正確(確保滿管)

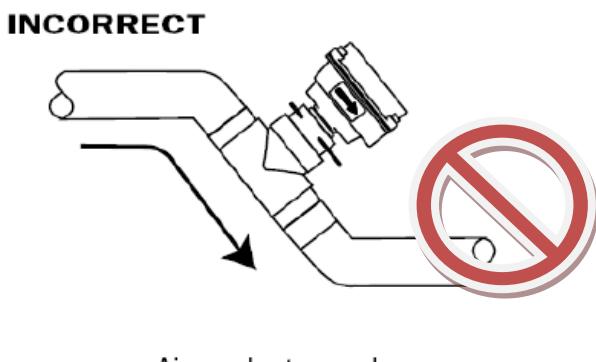

- 不正確(前置閥之空管現象將導致流體迭堆)

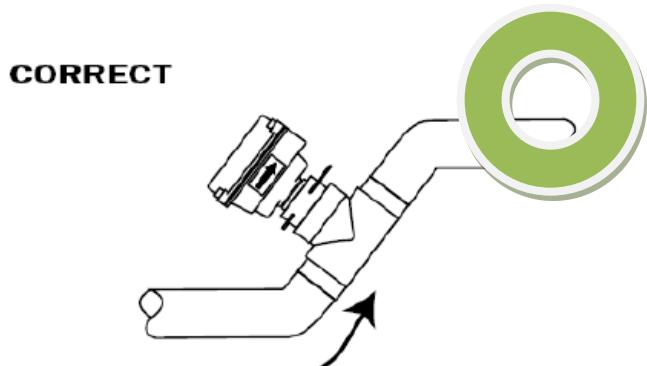

- 正確(保持滿管於感測器)

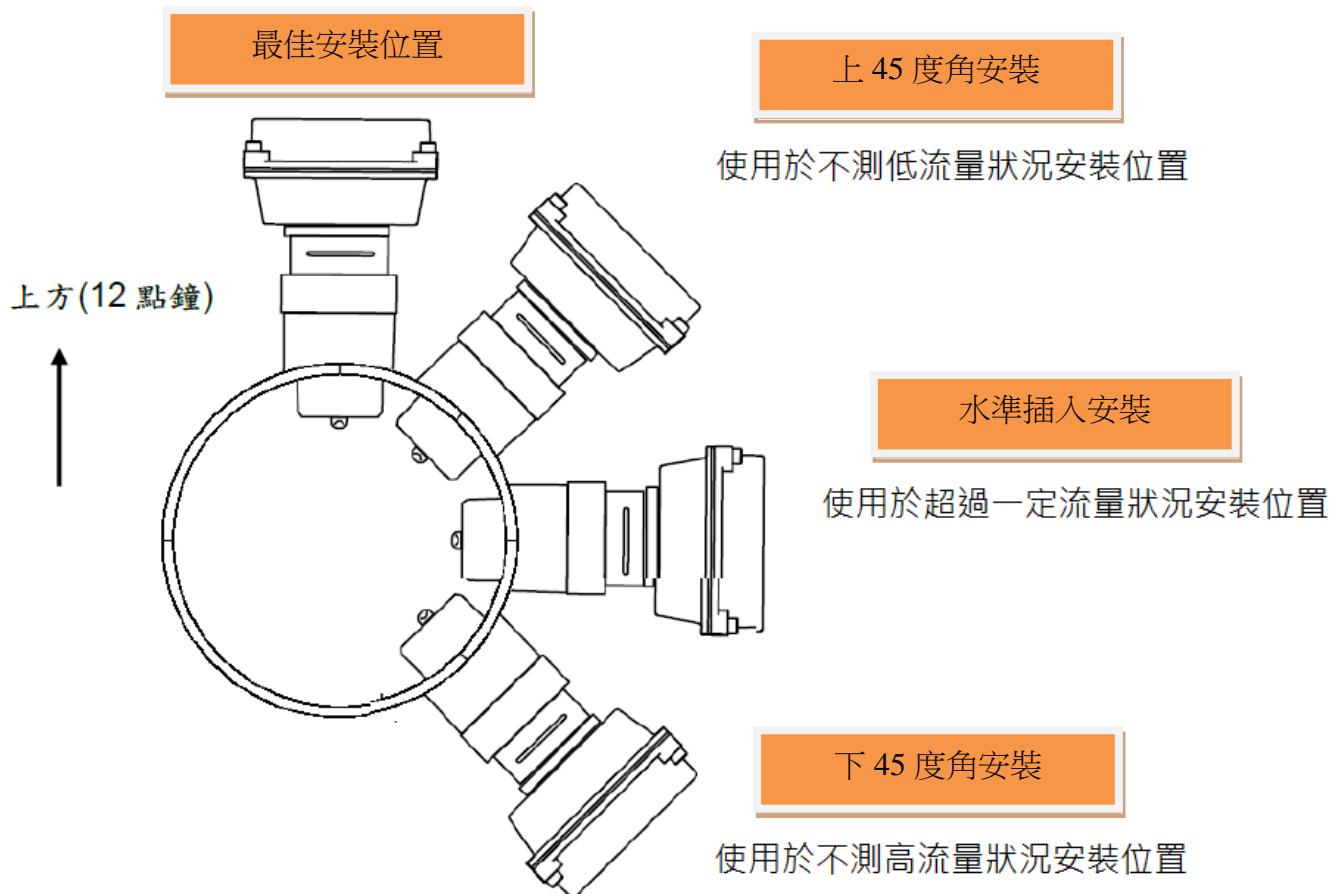

- 不正確(流體排放將受限)

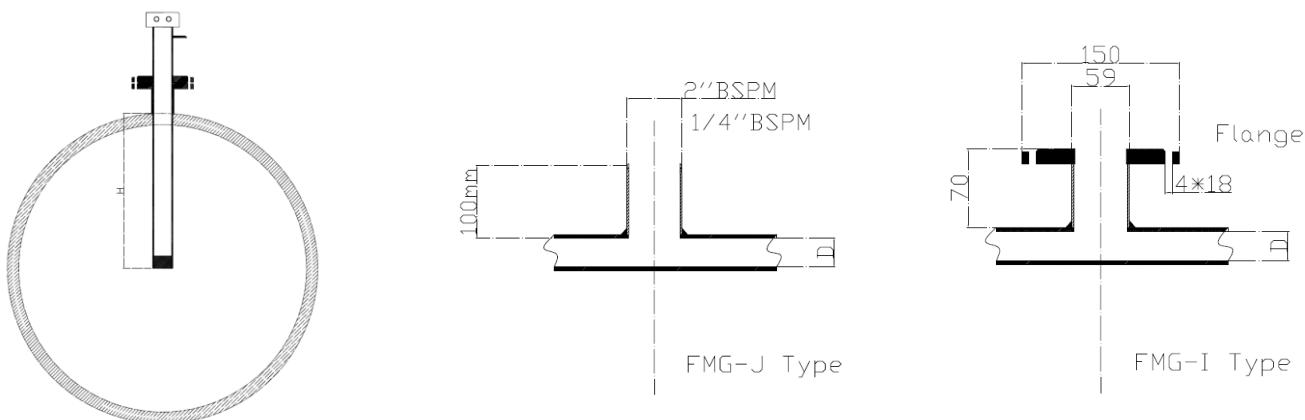

- 正確(流體順利排出)
